OVERVIEW

What is Momentum?

A macOS desktop productivity app designed around the world's best productivity frameworks

Momentum is a fully offline, locally-hosted productivity suite that combines task management, time tracking, goal setting, journaling, and deep-work analytics into a single cohesive application. There are no cloud servers, no subscriptions, and no privacy concerns — your data lives in a single SQLite database on your Mac.

Tech Stack

Electron 29

React 18

better-sqlite3

Tailwind CSS

Vite

@dnd-kit

Recharts

electron-builder

Architecture

Electron Layer (Main Process)

- **main.js** — App bootstrap, IPC handler registration, auto-backup, OS notifications, deadline polling
- **preload.js** — Secure contextBridge exposing 60+ API methods to the renderer
- **database.js** — All SQLite queries, migrations, and business logic (~1400 lines)

React Layer (Renderer)

- **AppContext** — Global state via useReducer: projects, active timer, navigation, theme
- **SettingsContext** — App preferences (Pomodoro durations, hour goals, notifications)
- **12 component folders** — Dashboard, Projects, Inbox, Goals, Reports, Calendar, Journal, Habits, Focus, Layout, Search, UI

Data Storage

Single SQLite database at `~/Library/Application Support/Momentum/productivity.db`

FEATURES

Full Feature Set

Everything Momentum can do, organised by module

Projects & Tasks

- **Kanban board** — 4 columns: To Do · In Progress · Blocked · Done
- **Drag-and-drop** task reordering and column changes via @dnd-kit
- **Rich task fields** — title, emoji icon, priority, due date/time, start date, start time, estimate, description, recurrence
- **Subtasks** with individual time estimates and visual progress bars
- **Comments** — threaded discussion on any task
- **Tags** — colour-coded labels, multiple per task
- **Task staleness alert** — amber "Stale" badge on cards untouched for 21+ days
- **Recurring tasks** — daily/weekly/monthly; auto-creates next occurrence on completion
- **Deadline countdown** — live timer on card when within notification window
- **Project templates** — save any project's task structure and reuse it
- **Project Diagram** — SVG dependency graph with solid status-colour nodes
- **Project archive** — retire completed projects without deleting data

Time Tracking

- One-click timer from task card, task detail panel, or dashboard
- **Pause/resume** with paused state preserved across navigation
- **Work-type toggle** on live timer — Deep / Shallow / Admin (stored per session)
- Automatic session split on laptop sleep/wake
- Manual time entry editing and deletion
- Per-task and per-project cumulative time display

Quick Capture Inbox (GTD)

Based on David Allen's [Getting Things Done](#)

- **%N anywhere** — instant capture modal, zero friction, lands in Inbox
- Sidebar Inbox item with live **unprocessed count badge**
- Inbox view: list all captures → "Process" → pick a project → task moves
- GTD philosophy: capture everything without interrupting flow, process later

★ Daily Intentions / MITs

Based on the Most Important Tasks methodology

- Pick up to **3 Most Important Tasks** for today each morning
- MIT strip across dashboard header — shows MITs with live done/not-done status
- Crossed-out styling when a MIT is completed
- Persisted per date; feeds into End-of-Day Review

Guru-Inspired Features

Six features derived from world-class productivity research

4DX Goals (Wildly Important Goals)

Based on The 4 Disciplines of Execution (McChesney, Covey, Huling)

- **Goals view** — create/edit/delete WIGs with lag measure, lead measure, target date, linked project
- **Scoreboard** on Dashboard — lag progress bar, lead measure vs weekly target, 6-week sparkline with win/lose dots
- **Cadence of Accountability** in Weekly Review — see last week's commitment, write this week's pledge
- WIG-level and global weekly commitments both saved

Productivity Heatmap

- Hour x Day grid (24 hours x 7 days) showing when you are most productive
- Colour-coded intensity from all tracked time entries (indigo gradient)
- Peak hour and best day automatically highlighted
- Displayed prominently at the top of the Reports page

Deep / Shallow / Admin Work Tagging

Based on Cal Newport's Deep Work

- Work-type pill on the live timer in TopBar — switch between Deep, Shallow, Admin in one click
- **Work Type widget** in Reports — this-week split with stacked bar chart
- Cal Newport benchmark tip if deep work falls below 40%

- Target: 60%+ of tracked time should be deep work

Task Staleness Alerts

- Tasks untouched for **21+ days** show an amber "Stale" badge on their Kanban card
- Catches forgotten work and prompts action or deletion
- Calculated from `updated_at` timestamp, ignored for done tasks

End-of-Day Review

Based on end-of-day shutdown ritual (Newport, Covey)

- Triggered via button on Dashboard — appears as a focused modal
- Shows: time tracked today, tasks completed, MIT completion rate (X/3)
- "What carries over to tomorrow?" — intentional carry-forward
- "Wins / learnings" reflection prompt
- Saved in `daily_reviews` table for historical reference

Focus / Pomodoro Mode

- Full-screen immersive focus mode (press **F** or TopBar button)
- Configurable work / break / long-break / sessions-before-long-break
- Auto-start next session option and sound notifications
- Links directly to active task timer

MORE FEATURES

Analytics, Reviews & Utilities

Reports & Analytics

- Time by project — pie chart
- Time by day — bar chart with today/week/month/custom range
- Entries table with project, task, start time, duration, notes
- CSV export of all time entries for the selected period
- PDF export of the full report view

Calendar

- Month/week/day views with task due date events
- Time entries shown as blocks on day timeline
- Same-task sessions within 10-minute gaps merged visually
- 5-minute minimum display threshold (filters micro-sessions from sleep/wake)

Journal

- Daily free-form notes editor with rich text
- Month calendar with dot indicators on days that have notes
- Recent notes list with 120-character preview

Habits

- Any daily recurring task automatically appears in the Habit Tracker
- 14-day completion grid per habit
- Streak tracking and visual completion state

Weekly Review

- Time this week vs last week comparison
- Tasks completed this week (corrected for timezone)
- Carried-over overdue tasks
- By-project time breakdown + day-by-day bar chart
- Cadence of Accountability commitment entry

Monthly Review

- Month vs previous month time and task completion comparison
- Completed tasks list for the month
- Project breakdown and day-by-day chart

Notifications

- OS notification for overdue tasks on app focus
- Deadline countdown notifications — configurable lead time per task (default 10 min)
- In-app notification bell for quick review
- Polling every 60 seconds for upcoming deadlines

Backup & Restore

- **Auto-backup** on every app launch — keeps the last 7 snapshots in auto-backups/
- **Manual backup** — save .db file anywhere via native file dialog
- **Restore** — pick any backup file to restore your data

Dashboard & Keyboard Shortcuts

Dashboard Layout

Top to bottom, the Dashboard is structured as:

- 1 MIT Strip — Today's 3 Most Important Tasks + "Set MITs" + "End-of-Day Review" buttons
- 2 Today at a Glance — Overdue · Due today · In-progress tasks · Time logged · Tasks completed today
- 3 4 Stat Tiles — Time Today · Time This Month · Tasks Completed · Active Projects
- 4 Bar Chart (day/week/month/custom) + Project Pulse panel
- 5 Active Tasks list with inline timer start button
- 6 Time Goals progress bars (daily + weekly — if configured in Settings)
- 7 4DX Scoreboard — all active WIGs with sparklines
- 8 Habit Tracker — 14-day grid for all daily recurring tasks

Keyboard Shortcuts

SHORTCUT	ACTION
⌘K	Open global search
⌘N	Open Quick Capture (send to Inbox instantly)
F	Toggle Focus / Pomodoro mode
?	Show all keyboard shortcuts

Settings

- Pomodoro — work duration, break, long break, sessions before long break, sound on/off
- Daily and weekly hour goals — shown as progress bars on Dashboard
- Work start hour — used for scheduling reference
- Default deadline notification lead time
- Light / dark theme toggle

Global Search

- 🔍 from anywhere — searches tasks and projects simultaneously
- Results grouped by type with priority badges and status indicators
- Click any result to navigate directly to that task's project board

Reports Page Layout

1 Productivity Heatmap (hour × day grid) + Work Type Breakdown widget

2 Period selector (Today / This Week / This Month) + Project filter

3 Summary stats — Total time · Entries · Tasks done

4 Bar chart (by day) + Pie chart (by project)

5 Full time entries table with CSV / PDF export
